

- 1) Check that Power Broker's **"E-Mail Software"** field and the **"MV="** variable are the same value.

- 2) Click, **Start, All Programs, Accessories, Command Prompt**. At the command prompt type **"set MV"** and press the **<Enter>** key. The **MV=** variable will be displayed as shown below.

```
C:\Users\WIN764BIT>set MV
MV=R:\EMAIL\
```

- 3) The **MV=** variable should be the same value as shown in Power Broker's **"E-Mail Software"** field. In the example above it is **R:\EMAIL**. Check the "Environment Variables" for a MV setting in both **"User variables for"** and **"System variables"** as shown below. If these variables are not there, then add them and restart the PC.

- 4) Click, **Start, All Programs, "MASTERCOM BrokerEDIPC E-Mail-EDI Engine .NET", "Settings – System"**, the version is given in the top right corner. Please see below, the version indicated is "8.8"
