

Installing the Backup Capability For The First Time When Running Setup.exe

To have the BrokerEDI/PC E-Mail/EDI Engine backup each communications session, the 7-Zip software must have been installed in the \EMAIL\7-Zip folder. This is done at the time the BrokerEDI/PC E-Mail/EDI Engine is installed. After the “Finish” button is clicked you will get the following dialog box.

1) The 7-Zip software is installed by running the the 7-Zip installation file **7z1805-x64.exe**, located in the “...\EMAIL\7-Zip” directory.

Note: “7z1805-x64.exe” **defaults to installing its software in the “C:\Program Files(x86)\7-Zip” folder but it must be installed in the “... \EMAIL\7-Zip” folder** on the server.

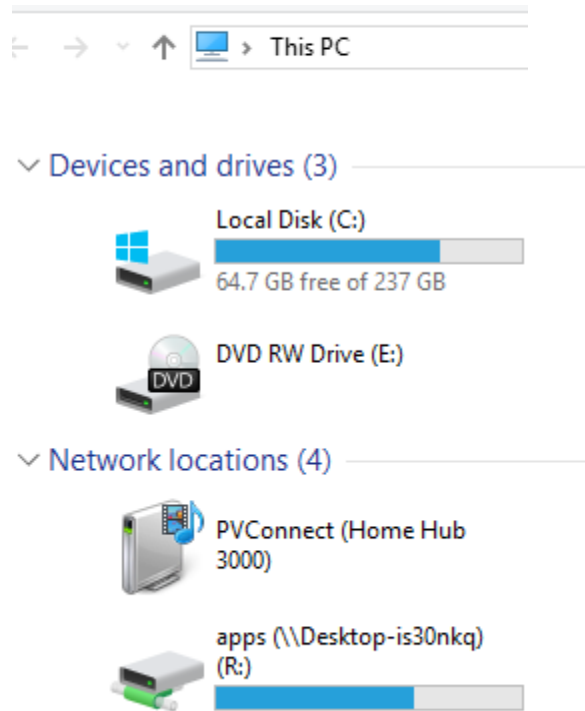

2) Click the Browse button or type in the UNC path, as illustrated below to the ...\EMAIL\7-Zip folder. To find out the UNC of a mapped drive, in this case, “\\Desktop-is30nkq\apps” please see the next page.

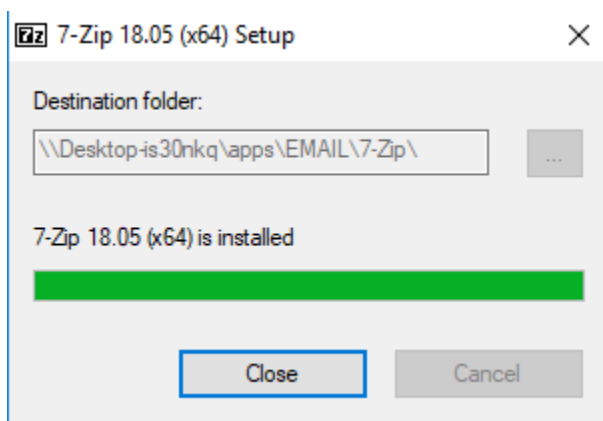

HD0015 A Zipped Backup of Your Communications Session Download

To find the UNC of the EMAIL mapped drive, right-click the Windows icon and from the pop-up menu pick **“Search”**, In the search box replace **“Type here to search”** with **“This PC”** and from the **“Best match”** list, pick **“This PC”** In this case the mapped drive is **R:** and its UNC is **“Desktop-is30nkq\apps”** as shown above (**R:**) in the **“Network locations (4)”** list below.

3) You should get the dialog box, see below, with the message **“7-Zip 18.05 (x64) is installed”**.

Installing a New Version of the 7-Zip software

Before installing a new version the old version must be uninstalled by:

- a) Exploring to the ...\\EMAIL\7-Zip folder and running “Uninstall.exe”.
- b) Reboot the PC.
- c) Explore to the ...\\EMAIL\7-Zip folder and delete “7-zip.dll”

After uninstalling the old version, do steps 1 to 3, above, to install the new version
e.g. 7z1805-x64.exe

At the End of Each Communication Session

At the end of each communication session you will see:

```
-- There no received memos to process.  
Please wait, a zipped backup of your download is being done.  
MVBACKUPDL=R:\EMAIL\BACKUPDL\Jul0818163921.7z
```

Note: zipped backups are found in the \\EMAIL\BACKUPDL folder.

Restoring a Policy or eDocs Download

To restore a Policy download or eDocs download use the program-items, shown below, to restore a session’s download back into to the \\EMAIL folders.

-
-  3 - Restore a Policy Download
 -  4 - Restore an eDocs Download

Use the Power Broker “Reformat” and “Merge” commands, shown below, to again import the download.
