

- 1) Open search (Windows logo key + S) and begin typing "Edit env.."

- 2) As shown above, choose the "Edit environment variables ..." match.
- 3) Both the "User" and "System" MV environment variable should have the single character mapped drive letter plus "\EMAIL\" e.g. **R:\EMAIL**, as shown below. If you change these, you must reboot. These should match the value specified in Power Broker.
